

## NUCLEAR FOREVER

Germany is turning away from nuclear power once and for all in 2022. Because the risk is too high, the technology unmanageable. Yet the nuclear nightmare goes on: with umpteen thousands of tonnes of radioactive waste whose storage isn't the least bit clear. With the hazardous dismantling of power plants which will take decades and gobble up many billions of euros. And with neighbours who firmly hold on to mankind's dream of atomic energy. The feature-length documentary film NUCLEAR FOREVER by Carsten Rau takes an equally profound and alarming look at the nuclear nightmare. That has no end.
